

Program 3
Due Wednesday July 22nd , 2009

This program is called Guessing A Number . The function of this program is to guess a number and after several calculations, the final result should be 1. **Your job is to write a Cobol program** that does this calculations. Your program should follow the following steps:

- 1) Reads a number from an input file.
- 2) Add 3 to this number.
- 3) Multiply your answer by 2.
- 4) Subtract 4 from your answer.
- 5) Divide your answer by 2
- 6) Subtract the number with which you started.

If you carry out these instructions carefully, you will get 1 at the end of your program.

Number-File

```

NumIn
999
field Size with Numeric Values
  
```

Output-List

Number Report		DD/MM/YY			
Org. Number	Step1	Step2	Step3	Step4	Final Value
999	9999	9999	9999	999	9
